

## conceal

[/Reference manual/Z-related commands/In situ replacement commands](#)

The *conceal* command causes the inspected part of a goal to be replaced by ... in the on-screen presentation. The hidden formula can be resurrected later using the *reveal* command.

The *conceal* command is applicable to predicates and to expressions.

$$\begin{array}{lcl} p & \Longrightarrow & \dots \\ e & \Longrightarrow & \dots \end{array}$$

### 1. Tactic example

*“conceal” p e*

This example applies the *conceal* command to predicate *p* and expression *e*. Its use in tactics typically arises from recording scripts.
