

annotation

[/Reference manual](#)/[Z-related commands](#)/[Proof rule commands](#)

The *annotation* command attaches some informal text to a goal. This informal text appears when a proof is printed using the *printed proof* command.

The *annotation* command is applicable to an entire goal. A dialogue box allows entry of the informal text. That box is primed with the previous response in the case of a goal whose previous proof attempt was an *annotation* command. This supports both interactive inspection of annotations and correction of typos.

1. Tactic example

“annotation” “text” g

This example applies the *annotation* command to the goal *g* giving it the annotation *“text”*.
