

Extensions to ISO Standard Z

[/Reference manual](#)

The following notation is recognised by cadiz in addition to the notation of draft Standard Z. Run cadiz with the `-ws` option for warning messages about the first use of each of these non-standard notations.

- [Let expressions](#)
- [Exclusive or](#)
- [String literals](#)
- [Comments](#)
- [Multiple DeclNames before ==](#)
- [Sequents](#)
- [Schema overriding](#)
- [Schema postcondition](#)
- [Rational numbers](#)
- [Mixfix injections in free types](#)
- [Type-constrained generics](#)

Quit

- Undecoration expressions
- Unboxed paragraphs

The tactic language and the refinement editor both impinge on the Z syntax, though they are not extensions to Z per se; their effect on Z is to make several names be reserved words—see [Deviations from ISO Standard Z](#).
