

Proof rule commands

[/Reference manual/Z-related commands](#)

These commands manipulate goals in proofs, typically rearranging antecedents and consequents, or fetching paragraphs from the specification.

- *annotation*
- *antecedent intro*
- *axiom*
- *consequent intro*
- *constraint*
- *cut apart*
- *disjointness*
- *elimination*
- *induction*
- *injectivity*
- *lemma*
- *membership*
