

standard toolkit

/Reference manual

Users of cadiz will probably prefer to use its own [extended toolkit](#), for its additional tactics, laws, and operations. However, for checking conformance to ISO Standard Z, it is straightforward to revise a specification's section headers to cite the standard toolkit instead.

- [section set_toolkit](#)—operations on sets
- [section relation_toolkit](#)—the above and operations on relations
- [section function_toolkit](#)—the above and operations on functions
- [section number_toolkit](#)—operations on numbers
- [section sequence_toolkit](#)—all of the above and operations on sequences
- [section standard_toolkit](#)—all of the above (same as sequence_toolkit)
